

Amendments to the Specification

Add the following paragraph on page 1, immediately following the title of the invention.

CROSS-REFERENCE TO RELATED APPLICATION

This application is a continuation of U.S. patent application serial number 09/296,094, filed on April 21, 1999.

Amend the paragraph beginning on page 12, line 3 as follows:

With reference ~~then,~~ to Fig. 4, shown is a flow chart of the document analysis logic 170 (Fig. 1) according to an embodiment of the present invention. The document analysis logic 170 begins with block 403 in which a specific digital document 229 is identified for the interim analysis. This may be accomplished, for example, by choosing a document from a pick list or a scanned document may automatically be selected. If a digital document 229, then the document analysis logic 170 proceeds to block 406. If not, then the document analysis logic 170 loops back into block 406 where it ultimately remains until a document is identified. In block 406 an interim analysis subroutine is executed as will be discussed.
